More Power To You

**We've tilted things in your favor to bring you more power
with the fastest payback in the industry.**

More power by giving you more total energy production than any other solar panel on the planet. More power by providing a light, durable, easy-to-install product that keeps making you money. More power to you, your customers and our future by reducing costs, reducing our carbon footprint and – along the way – creating rooftops that help sustain us all.

Plug into the 25 years of innovation that's powering the **world's leader in rooftop performance** and you'll understand, first hand, how we can bring More Power To You. That's why companies like Coca-Cola, General Motors, ProLogis, IKEA and the rest of our global customers chose *UNI-SOLAR*.

UNI-SOLAR.

One Sun. One Planet. One Company. *UNI-SOLAR.*

Why PowerTilt?

FASTEST PAYBACK

-  **The Angle**
Because of its fixed angle, PowerTilt optimizes an already high-performing technology by 10-20%.
-  **Real Power for the Real World**
UNI-SOLAR PV products produce more total energy than any other solar panel on the planet. PowerTilt outperforms the competition because of its low light, high heat and shadow tolerant performance.
-  **Low Cost, High Return on Investment**
Lowest Levelized Cost of Energy (LCOE) AND the highest Internal Rate of Return (IRR) for any solar investment, combine to make PowerTilt the smart choice for your money.
-  **Easy Installation and Removal**
Light and easy to handle, with attachment options to facilitate installation to a variety of roofing materials. And PowerTilt assembly is easy to remove for re-roofing, roof modification or maintenance.

LOW IMPACT ON YOUR ROOF

-  **Lightweight**
At 2.1 pounds per square foot, PowerTilt is the lightest in its category and ideal for low load-bearing roofs. And it can be installed without costly structural roof reinforcement.
-  **Durable**
Glass-free and encapsulated in UV-stabilized, weather-resistant polymers, it holds up against Category 3 hurricane winds, hail, and other heavy impacts, and comes with a 25-year limited power output warranty.
-  **No Penetration**
The simple mounting frame installs without roofing penetration. Attachment components are available for gravel, PVC, TPO, EPDM, Modified Bitumen and standing seam metal roofs.

“The new solar arrays on our rooftops are reducing our energy costs and carbon footprint, while providing green energy to the community.”

— ELIZABETH A. LOWERY, Vice President, GM
Environment, Energy and Safety Policy
